CONSUMABLES FOR FLEXO PRINTING PRESSES

Why Consumables?

Despite their often small sizes and costs, consumables have a big impact on production performance and product quality. There are major interdependencies between printing press, substrate and consumables such as ink, printing plates, doctor blades or doctor blade chamber seals. Choosing the right consumables therefore is crucial to get the most out of your printing machine.

W&H therefore offers a wide range of high-quality consumables for printing presses – originals as well as others especially adapted to W&H machines and the high demands of the printing process. In particular our portfolio includes consumables such as doctor blades and doctor blade chamber seals.

Your advantages

- ✓ High-quality consumables especially developed for W&H printing presses
- ✓ Individual expert advice for your optimal consumables package
- ✓ Technical support for your production and printing related challenges
- ✓ Increased productivity and product quality
- ✓ Reduction of downtimes and set-up times

Original W&H Consumables

W&H Doctor Blade Chamber Seals

- Especially for W&H machines
- Highest quality
- For various requirements and applications

W&H Doctor Blades

- Suitable for all machines
- Highest quality standards
- For various requirements and applications

Individual advice

To ensure that you use the most efficient consumables for your needs, we support you with individual expert advice. Our experts will be happy to help you choose the right setup and settings for your printing press to optimize uptime and production results.

Our advice includes

1. In-depth expert analysis regarding your machine, orders, quality, and productivity to identify improvement potential.

2. Development of an optimally harmonized consumables package to improve productivity and print quality.

3. Optimization of machine settings and the printing process.

4. Tips for professional machine operation and support with production-related questions.

Are you interested in finding out what you can optimize and get out of your machine?
Contact your local sales manager or get in touch with our experts directly by email.

[@ consumables@wuh-group.com](mailto:@consumables@wuh-group.com)

“ In particular, the individual advice at our plant was helpful and qualified. We will continue to use the high-quality W&H Doctor Blade Chamber Seals in the future and can recommend them without reservation.

Andy Spengel
Project Manager, Fibertex Personal Care AG

W&H DOCTOR BLADES

High-quality doctor blades for optimum printing quality

Why W&H Doctor Blades?

For optimum printing results, it is important to adapt the consumables to the requirements of the printing process and the machine.

While the doctor blade ensures clean ink application on the print substrate, it also has a sealing function. Only with the right specifications for each color deck you can avoid leaks and ensure first-class printing quality even at high speeds and long runtimes. This requires not only the selection of the right materials and dimensions, but also the correct grinding of a doctor blade.

W&H doctor blades meet the highest quality standards and are suitable for flexographic printing presses from various manufacturers. Our portfolio includes doctor blades for a wide range of applications. They are available in different materials and specifications - either as rolls for

Your advantages

- ✓ High-quality doctor blades for different requirements
- ✓ Reduction of leaks
- ✓ Increased lifetime and productivity
- ✓ Clean ink application and consistent printing quality
- ✓ Individual consulting
- ✓ Pre-cut doctor blades

manual cutting or pre-cut to fit the most common working widths. This way you are optimally equipped for the challenges in your daily production.

Advantages of pre-cut doctor blades

With the perfectly pre-cut doctor blades, you save the work process for manual cutting and can install the doctor blade directly into your machine. In this way, you ensure optimum interaction between the doctor blade, chamber end seals and anilox roller, and avoid problems such as leakage caused by incorrect cutting.

Available grindings	Rounded Lamella	Rounded Lamella	Rounded Lamella

Available grindings

In addition to the selection of the right material, the correct grinding of the doctor blade is also important. The grinding of the working edge controls the ink application and has a significant influence on the printing quality.

Rounded

The rounded grinding on the working edge ensures an optimal angle to the anilox roll and prevents problems such as back-doctoring and scoring lines. The increased lifetime offers cost advantages at high doctor blade consumption.

Lamella

The lamella doctor blade is the most commonly used doctor blade in flexo printing. The fine step ensures an optimal contact zone of the working edge with the anilox roller and guarantees highest printing quality.

W&H DOCTOR BLADES MADE OF PREMIUM CARBON STEEL

The solution for solvent based inks

Why a premium carbon steel doctor blade?

The multi-purpose doctor blades made of high-quality carbon steel are the optimum solution for the use of solvent based inks. They are gentle on the anilox roller and have a longer lifetime than conventional standard doctor blades. Thanks to their fine material structure, they protect the ink system from contamination and ensure consistently high printing quality.

Your advantages

- ✓ Increased lifetime
- ✓ For solvent based inks
- ✓ Reduced anilox roller wear
- ✓ Short start-up times
- ✓ High printing quality
- ✓ Reduced waste

W&H DOCTOR BLADES WITH CERAMIC COATING

The solution for long runtimes and abrasive inks

Why a ceramic coated doctor blade?

The ceramic coated doctor blades are characterized by a very high wear resistance. They are therefore particularly suitable for the use of abrasive inks such as white, silver or gold. They can also be used for both solvent based and water based ink systems. With their homogeneous surface, they ensure consistently high printing quality.

Your advantages

- ✓ Very long lifetime
- ✓ For abrasive inks
- ✓ For solvent based and water based inks
- ✓ Reduced downtime
- ✓ High printing quality
- ✓ Reduced waste

Abrasive inks

Abrasive inks have a high proportion of insoluble particles. They therefore cause particularly high wear on the doctor blade. In addition, coarse anilox rollers are often used for abrasive inks, which further increase wear. Therefore, we recommend the use of durable ceramic-coated doctor blades for abrasive inks.

W&H DOCTOR BLADES MADE OF STAINLESS STEEL

The solution for water based inks

Why a stainless steel doctor blade?

The stainless steel doctor blades are the optimal solution for the use of water based inks. With their special steel quality, they prevent corrosion and ensure consistently high printing quality even over long runtimes. In addition, they are also suitable for the use of aggressive inks with extreme pH values and guarantee clean ink application.

Your advantages

- ✓ Corrosion resistant
- ✓ For water based inks
- ✓ For aggressive inks
- ✓ Increased lifetime
- ✓ Clean ink application
- ✓ High printing quality

W&H DOCTOR BLADE CHAMBER SEALS

High-quality doctor blade chamber seals specially developed for W&H machines

Why W&H Doctor Blade Chamber Seals?

For optimum printing results it is essential to adapt the consumables to the printing press and the requirements of the printing process. The doctor blade chamber seals in particular have a significant impact on the efficient operation of the color decks.

Original doctor blade chamber seals from Windmüller & Hölscher are manufactured with the highest precision and are specially developed for use on our high-quality flexo printing presses. We use only qualified and high-performance materials, which also ensure the high requirements for mechanical explosion protection. This ensures safe operation of your printing press and, at the same time, optimum ink application without leakage. And that even at high printing speeds and long runtimes.

Our consumables portfolio includes a wide range of end seals for various applications. This way, you are optimally equipped for all challenges in your daily production. Our product range includes not only seals for the current W&H machine portfolio, but also for older printing presses.

Your advantages

- ✓ Preventive explosion protection
- ✓ Optimally matched to W&H printing presses
- ✓ Increased stability of the doctor blade chambers
- ✓ Prevention of leakages
- ✓ High-quality seals for various applications
- ✓ Increased uptime and productivity
- ✓ Individual advice

“ The seals provided by W&H are of high quality. They ensure high performance with remarkable sealing capability. We also appreciate the qualified technical support and continuous help of the W&H team.

Mohamed Taghian
