Why RUBY Anilox?

Speed up your setup process

Can you see the actual condition of your anilox rollers? Which ones need cleaning? Which ones are defective? At first glance, all anilox rollers, even those with the same specifications, look the same. As a result, up to one in three jobs requires anilox roller replacement. This wastes time, ink, materials and money.

Stop gambling and use the RUBY Anilox smart tool management system! View the history of your anilox rollers and select the right anilox roller for your inking unit. Easily record your anilox data and digitize your manual processes: Automatically track your job-related running meters during production. Mark your anilox roller defects directly in PROCONTROL as they occur. Use your RUBY Anilox App to organize and record the volume measurements and cleaning of your anilox rollers based on their history.

Take advantage of your data while preparing your next print job: View real-time updated conditions of your anilox rollers in PROCONTROL or in your RUBY Anilox App and use our convenient features to directly define the right anilox rollers for your job. Speed up your set-up process and increase your efficiency by using RUBY Anilox.

Your advantages

✓ **Efficiency:** RUBY Anilox saves up to 30 hours per month by optimizing anilox roller selection.

✓ **Cost-saving:** Reduce waste of time, ink, materials, and money associated with roller replacements.

✓ **Smart Management:** Digitize processes, track running meters, and mark defects.

✓ **Data Utilization:** Access real-time data for informed decisions, boosting efficiency and reducing errors.
